

Click events in Google Web Designer project

How to add click events in your GWD project

Step 1:

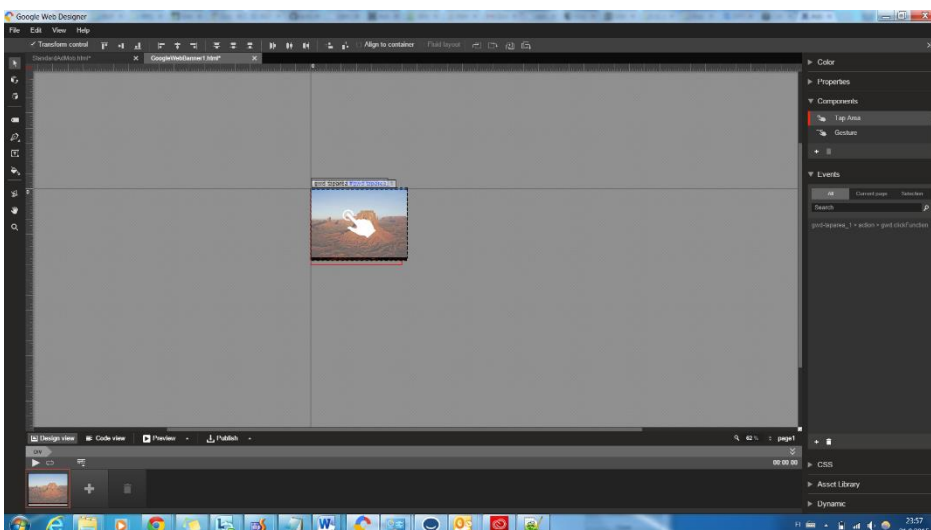

Open Code view in Google Web Designer and Add the following code snippet to head section of the banner

```
<script src="https://sn.sanoma.fi/js/ClicksApi.js"></script>
```

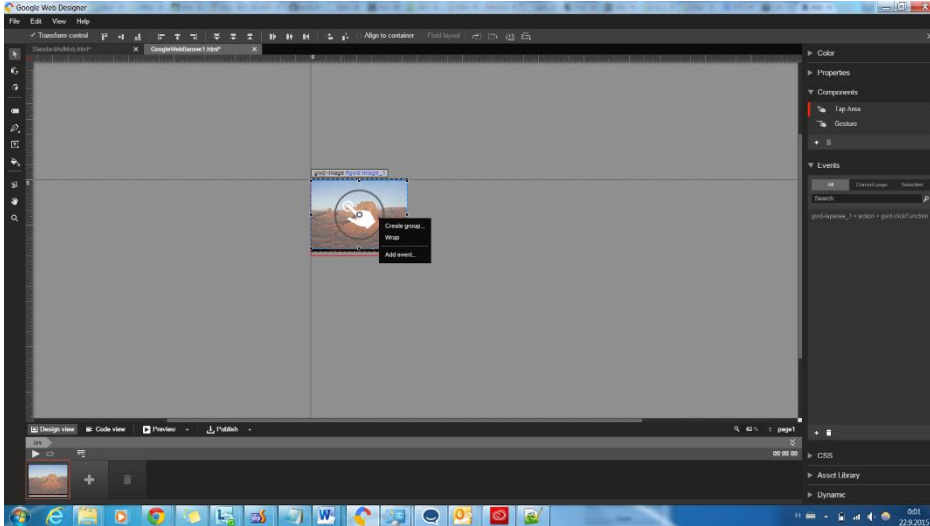

Step 2:

On the particular area in your banner, create the tap area from the Google Web Designer's Components section as shown below

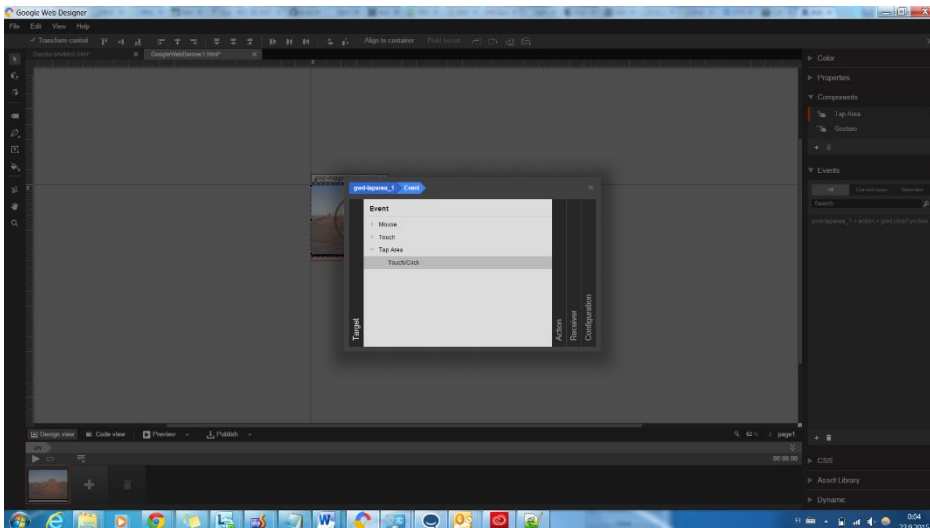

Step 3:

Using your right mouse button, push and click "Add event.."

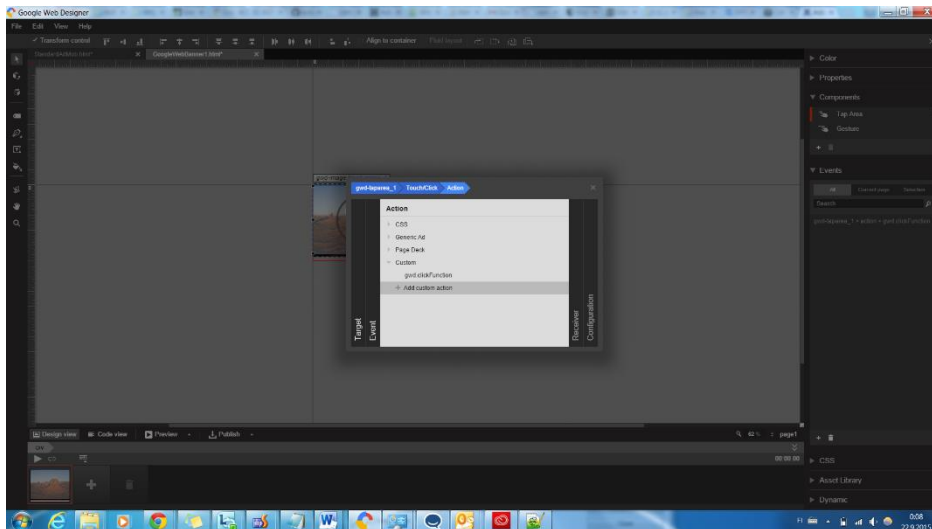

Step 4:

Select "Tap Area" and then "Touch/Click". (Note: You can also select only "Mouse" and then "Click" in case you only want to target this ad to desktops)

Step 5:

Click "Add custom action"

Step 6:

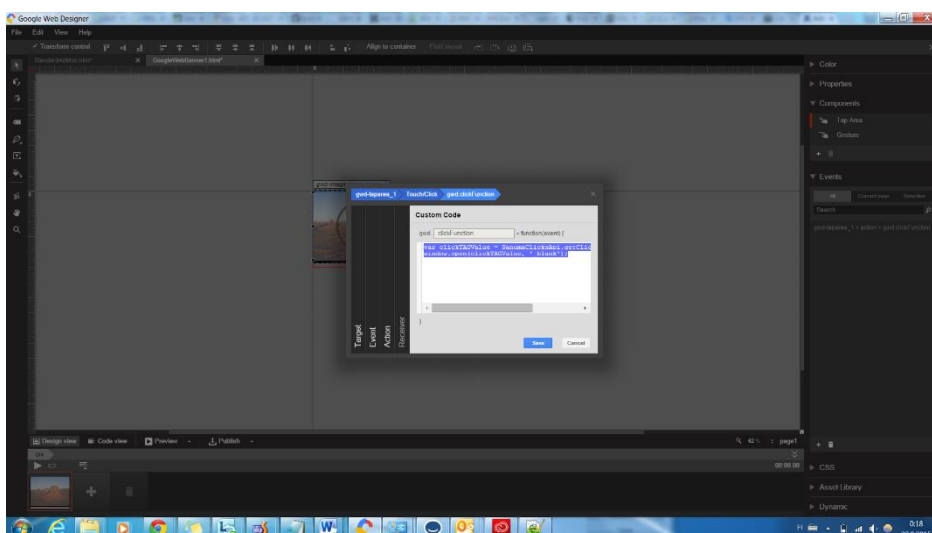

Define some function name and the following code snippet.

`SanomaClicksApi.openClickTag();`

Note: Please use following code snippet in case you already know the clickthrough URL

`SanomaClicksApi.openClickUrl("https://yourlinkgoeshere");`

Note: The code mentioned in the picture below might be different, always use the one that is mentioned in instructions rather than what is displayed in a picture

Step 7:

Click "Save", and now you can publish your banner.
